## Consultancy services for activating the Saudi Highway Code

Scientific Responsible Professor Andreas Loizos

The present project focuses on necessary activities and services to ensure the understanding of Saudi Highway Code (SHC) by all involved practitioners, consultants, contractors, and relevant entities and to effectively activate and apply the Code across the multiple authorities and entities concerned with its use and application. Therefore, this project aims to activate the Code, so that it becomes a technical reference for authorities responsible for roads in the Kingdom of Saudi Arabia at all levels (i.e. ministries, royal authorities in cities, development authorities in the regions, city development authorities, regional Amanahs, and others). Through this technical code, the authorities will be able to access the necessary information for the planning, design, implementation, operation, and maintenance of roads of all classifications.
